### **DETAILED ACTION**

This Office Action is in response to applicants' amendment, filed on 07/06/2004, for the patent application S/N: 09/898957. Claims 1-19 are pending in the action.

#### ***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance:

1. The claimed invention is directed to a method for computing a Wave Transfer Vector from a surface point on a body to a reference position remote from the body based on the reciprocal principle. Independent claim 1 requires steps of simulating positioning of a monopole, omnidirectional wave energy source at the reference position remote from the body, reciprocally computing a boundary oscillation amplitude (pressure) of the wave generated by the source at a surface of the body, and deriving from the boundary oscillation amplitude the Wave Transfer Vector as claimed.
2. Because the closest prior art of record does not expressly disclose or suggest computing wave transfer vector based on grid point elements on the surface excited by a monopole source for boundary oscillation amplitude as claimed, claims 1-19 are thus deemed allowable.

#### ***Conclusion***

1. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
